

Screen-by-Screen Wireframe Specification

All-in-One Trade Ecosystem · Version 1.0 · 2 October 2026 · Working name: "The Platform" (SokoFlow rejected — brand conflict)
Companion to the SRS & Technical Blueprint v1.0. Screen IDs are stable and referenced in implementation tickets.

1. Design principles

1. Every trade mode uses the same underlying trade record, payment ledger, trust profile, messaging and fulfilment logic. Screens share reusable components; only the mode-aware action set changes.
2. One design language: search-first home, card-based browsing, escrow/protection banners wherever money moves, verification badges wherever trust matters.
3. Low-bandwidth conscious: text-first cards, compressed images, SMS fallbacks for order events, PWA caching on web.
4. Every screen must define: default, empty, loading, error and permission-denied states.

2. Navigation structure

Buyer app: 5-tab bottom nav — Home · Saved · Orders · Chats · Account.

Seller/business: same app; "Sell" entry in Account and mode chips surface listing tools. Dashboard tab appears inside an active business workspace.

Admin: separate web portal (no mobile tabs).

3. Core journey — S1 to S9

The nine screens below are wired up as wireframes in this document. They are the first implementation slice: they work end-to-end for Market (B2C) and remain the shared skeleton for every other mode.

S1 — Onboarding / Login (OTP)

Field	Specification
Purpose	Phone-first identity creation; OTP verification; language choice; role onboarding entry.
Regions	Logo block · phone input · OTP inputs (6) · primary CTA · legal consent · language chips · promoted role shortcuts.
Actions	Request OTP (resend timer 30s) · verify · switch language · pick a role onboarding path ("Start selling", "Register a business", "Sell wholesale", "Offer services", "Farm produce").
States	OTP error shake + retry counter (lockout 15 min) · wrong-number edit link · offline banner.
Data / engines	Supabase Auth (OTP); FR-ACC-01, FR-ACC-03.

Field	Specification
Purpose	Daily entry point; mode shortcuts; categories; featured and nearby listings; personalization.
Regions	Delivery-area selector + notifications · search bar · mode chips (Market, Deals, Bulk, Services, Agriculture, Imports) · category strip · featured grid (2-up) · nearby offers carousel · recently viewed row.
Actions	Search · change delivery location · tap mode/category/listing · save item (♥).
States	Empty home (categories only) · location unknown (prompt) · offline (cached listings banner).
Data / engines	Listing search (Postgres FTS), boosts (paid placement, labeled), Analytics (recently viewed).

S3 — Browse / Search Results

Field	Specification
Purpose	Find anything across modes; the mode toggle keeps one query, three result universes.
Regions	Search bar with query · mode toggle (Market / Deals / Bulk) · filter chips (sort, location radius, price, verified only) · result cards with image, price, key attribute, trust/delivery indicators.
Actions	Refine filters · sort (relevance, price, newest, distance) · open listing · save · share (WhatsApp deep link).
States	No results (suggest popular categories) · filter sheet (bottom sheet, apply/reset) · pagination via infinite scroll + count.
Data / engines	Search + boost ranking; FR-MKT-02, FR-DEAL-01, FR-BULK-01.

S4 — Listing Details

Field	Specification
Purpose	Convert interest into a trade action appropriate to the listing type.
Regions	Photo carousel (share, save) · price + title · mode-aware selector (variants/qty for Market; MOQ for Bulk; availability for Services; dates for Rentals; reserve for Auctions) · seller row (trust, rating, response time, storefront link) · delivery/returns/escrow info · secondary actions (Chat, Make offer) · sticky primary CTA.
Actions	Add to cart · make offer · request quote (RFQ) · book · place bid · choose rental dates · Buy For Me (imports) · report listing.
States	Out of stock (notify me) · unverified seller (warning banner) · expired deal listing (repost hint) · disputed item (removed).
Data / engines	All listing engines render into this shell; Trust & Safety badges; Communication (chat entry).

S5 — Cart

Field	Specification
Purpose	Review items, quantities, delivery choice; show money summary and escrow assurance.
Regions	Line items (image, variant, qty stepper, line total) · delivery/pickup selector · money summary · escrow & buyer-protection banner · sticky checkout CTA with total.
Actions	Edit qty · remove · change delivery · apply coupon · proceed to checkout.
States	Empty cart (recommendations) · price/stock change alert on stale items · single-seller vs multi-seller split note.
Data / engines	Inventory reservation check; FR-MKT-03.

S6 — Checkout

Field	Specification
Purpose	Collect destination and payment method; make the total and escrow terms impossible to miss.
Regions	Address card · delivery vs station-pickup toggle · payment method list (MTN MoMo with masked number, Airtel Money, card, COD) · full cost breakdown including fees · escrow/buyer-protection box · Pay CTA with amount.
Actions	Edit address · select payment · pay (PesaPal) · cancel.
States	Pending USSD/push confirmation ("Confirm on your phone") · failure retry with same idempotency key · COD availability per zone.
Mode variants	Bulk: milestone deposit schedule · Imports: landed-cost summary (item + freight + duty + VAT + delivery) · Services/Rentals: deposit now, balance on completion.
Data / engines	Finance & Ledger (FR-CORE-02/03), PesaPal IPN.

Field	Specification
Purpose	Follow every trade to completion; release escrow; start returns/disputes.
Regions	Status chips (All, To pay, Shipped, To review, Disputes) · order cards with stepper (Paid → Confirmed → Shipped → Delivered), courier + tracking code, ETA, escrow amount · delivered card actions (Receipt, Review, Buy again).
Actions	Open order detail · confirm receipt (releases escrow) · return request · refund · raise dispute · download receipt · review.
Mode variants	Bulk PO milestone tracker · Services booking status · Auction payout status · Imports hub hops (arrived at hub → shipped → cleared → local delivery).
States	Dispute-in-progress badge · refund pending · delivery overdue (auto-escalation notice).
Data / engines	Trade lifecycle (FR-CORE-01), Logistics events, Trust & Safety.

S8 — Chat / Negotiation

Field	Specification
Purpose	Every buyer-seller, RFQ and dispute conversation in one place, with structured offer cards.
Regions	Header (seller, verification, online status, report) · message thread · offer card (amount, terms, expiry, Accept/Counter/Decline) · context strip (listing or order reference) · composer with image attach.
Actions	Accept offer → checkout at accepted price · counteroffer · decline · send image · report/block · share to WhatsApp.
States	Offer expired · offer superseded · blocked composer · unread badge on nav.
Data / engines	Supabase Realtime; FR-COM-01, FR-DEAL-02; RFQ conversations (FR-BULK-02).

S9 — Account / Workspaces

Field	Specification
Purpose	One profile, trust status, workspace switching, verification, settings.
Regions	Profile header with trust score and verification ticks · workspace cards (Personal, Business, Farm, Supplier — add) · activity menu (orders, listings, saved, messages) · account menu (verification center, staff & permissions, language, notifications/SMS, security, support).
Actions	Switch workspace (global context change) · start verification flow · invite staff · change language · manage PIN/devices.
States	Pending verification item with status · workspace switch confirmation toast · permission-denied items hidden when role not held.
Data / engines	FR-ACC-02/04/05, Trust & Safety verification tiers.

4. Mode-specific screens (M1-M8)

Each mode adds its screens to the shared skeleton. Components from S1-S9 are reused; the table lists mode-unique screens and their key actions.

M1 — Market (B2C seller tools)

- MS1 Storefront** — banner, policies, ratings, active products, share link.
- MS2 Product management** — create/edit product: images, variants, price, category, delivery options; publish/pause.
- MS3 Inventory** — stock levels per variant, low-stock alerts (SMS optional), bulk CSV update.
- MS4 Promotions** — coupons, flash sales with schedule, boost purchase.
- MS5 Customer orders & returns** — order queue by status, print receipt, approve return, refund reasons.

M2 — Deals (C2C)

- DS1 Create listing** — photos, condition, price or "negotiable", location, expiry (14/30 days), repost.
- DS2 My listings** — views, offers count, boost status, edit/repost/delete.
- DS3 Offer inbox** — incoming offers, accept/counter/decline; accepted offer locks order at agreed price (escrow optional for shipped deals).
- DS4 Boost purchase** — daily/weekly placement, labeled "Promoted".
- DS5 Safety** — report/block flows, meet-up safety tips, number masking notice.

M3 — Bulk (B2B)

- BS1 Wholesale catalog** — lots with MOQ, quantity-tier price table, lead time, sample order option.
- BS2 RFQ composer** — spec, quantity, destination, deadline, invited suppliers or open; attachments.
- BS3 RFQ responses** — side-by-side quotation comparison (price, lead time, terms); award → PO.
- BS4 Purchase order detail** — milestones with escrow release per milestone, acceptance note, approvals chain.
- BS5 Vendor lists & recurring orders** — approved vendors, standing contracts, repeat order in one tap.

M4 — Services

SS1 Service listing — fixed/hourly price, service area, portfolio images.

SS2 Availability calendar — weekly slots, blackout dates.

SS3 Booking flow — pick slot → deposit (escrow) → confirmation; reschedule policy.

SS4 Job progress — milestones/photos by provider; completion triggers balance payment.

SS5 Reviews & rebooking — service-specific review, repeat-booking discount.

M5 — Auctions

AS1 Auction listing — terms, reserve price hidden, inspection photos, start/end time.

AS2 Live bids — bid history, current price, auto-extend last 2 minutes, watch.

AS3 Win & checkout — winner escrow with payment window (failure → second chance).

M6 — Rentals

RS1 Rental listing — day/week/month rates, deposit, operator add-on for machinery.

RS2 Booking calendar — availability, duration, quote with deposit.

RS3 Handover — condition photos checklist at pickup/return (timestamped).

RS4 Return — late-fee calc, damage dispute path, deposit release.

M7 — Agriculture

AG1 Crop/livestock listing — quantity, grade, harvest date, location, photos.

AG2 Buyer discovery — bulk buyers browse by region/crop; verified-buyer badge shown to farmers.

AG3 Trade sheet — agreed grade, delivery point, escrow on grade acceptance, market-price reference board beside the listing.

M8 — Ship From Abroad / Imports

IM1 Request form — paste product link or pick catalog item; quantity; notes.

IM2 Landed-cost estimate — item + freight + duty + VAT + local delivery from admin duty tables; confirm to pay deposit.

IM3 Consolidation tracking — hops: purchased → arrived at hub (Guangzhou/Dubai) → consolidated → shipped → cleared → local delivery.

IM4 Customs & delivery — clearance status, duty receipts, final delivery or station pickup; lost/seized policy refund path.

5. Seller / Business dashboard (D1-D8)

The dashboard renders inside the active workspace; modules appear by role and mode subscriptions held.

D1 Overview — sales, orders to action, enquiries, tasks, alerts (low stock, disputes, payouts).

D2 Listings — create/edit/pause across modes; bulk actions.

D3 Inventory — stock, variants, low-stock alerts.

D4 Trade management — orders, RFQs, quotations issued/received, POs, bookings, auctions, rentals in unified queues.

D5 Finance — ledger view, escrow held/released, commissions, refunds, payout requests and history.

D6 Customers — buyers, conversations, reviews, repeat customers.

D7 Staff — invite, role, permission scopes (cashier, manager, procurement officer).

D8 Analytics — views, conversion, sales, fulfilment performance; export.

6. Admin portal (A1-A10)

Web-only. Every action audit-logged.

A1 Platform overview — GMV, take rate, active users, trades by mode, alerts.

A2 Verification queue — ID/license submissions, approve/reject with reason, tier badges.

A3 Moderation — listing reports, flagged content, ban/restore.

A4 Orders, escrow & disputes — arbitration with evidence viewer, ledger-confirmed outcomes.

A5 Payouts & reconciliation — payout batches, PesaPal settlement vs ledger mismatch alerts.

A6 Logistics — delivery zones, rates, couriers, stations.

A7 Imports config — hubs, duty tables per HS category, freight partners.

A8 Commission & categories — rules per mode/category, category tree management.

A9 Fraud & audit — risk signals, velocity rules, audit log search.

A10 Analytics & reports — verification funnel, dispute rate, category heatmaps, exports.

7. Design system rules

1. **Reusable components:** ListingCard, TrustRow (verification + rating + response time), EscrowBanner, OfferCard, StatusStepper, FilterSheet, PaymentMethodList, WorkspaceSwitcher. Mode screens must compose these, not fork them.
2. **States required on every screen:** default, empty (with a next action), loading (skeleton), error (retry), permission-denied (hidden or explained).
3. **Money rules:** UGX integer formatting, fees always itemized before payment, escrow terms within one screen-width of every Pay button.
4. **Localization:** all strings via templates (English, Luganda, Runyoro, Swahili); no hardcoded copy; dates as "2 Oct 2026" style.
5. **Accessibility:** minimum 44px touch targets, 4.5:1 contrast, icon+label pairs (supports low digital literacy).

8. Build order (matches roadmap phases)

1. S1-S9 (core journey) — Phase 1-2 implementation slice, Market mode end-to-end.
2. D1-D8 seller dashboard — Phase 2.
3. Deals + Bulk screens (DS, BS) — Phase 2-3.
4. Services, Agriculture, Auctions, Rentals (SS, AG, AS, RS) — Phase 4.
5. Imports (IM), procurement, admin A1-A10 refinements, partner interfaces — Phase 5-6.

9. Acceptance criteria for the core journey slice

1. A new user can register by OTP, set location and language, and browse S2-S3 without any seller role.
2. A product can be added to cart, checked out with MoMo sandbox, and tracked to escrow release (S4-S7).
3. Buyer and seller can negotiate via a structured offer and complete the trade at the accepted price (S8).
4. All four workspaces render correctly with role-gated menu items (S9).
5. Empty, loading and error states exist on every core screen.
